

PERMANENT MAKEUP: PRE PROCEDURE INFORMATION

Thank you for choosing Lasting Impressions. Please read the following instructions carefully before undergoing any permanent make-up procedure. These guidelines apply to make-up application, corrective camouflage, or paramedical reconstructive tissue repair.

GENERAL INFO:

- All permanent make-up procedures require multiple appointments. A follow-up session is necessary within 8 to 12 weeks to ensure the result is optimal. Permanent make-up is an art form, and adjustments to shape or colour may be required.
- Immediately following the procedure, the colour will appear dark and intense. Over the next 3 to 5 days, this colour will soften as it settles into the skin.
- For lip procedures, the initial colour will appear very dark, then flake or scab off, potentially becoming nearly invisible. It may take 21 to 28 days to see the retained colour. Mucosal areas retain colour differently, and bold results are difficult to achieve.
- An overall fading on initial procedures is approximately 30% – 40%

BEFORE YOUR APPOINTMENT:

- Inform your artist beforehand if you have had previous permanent make-up from another technician.
- Expect redness and swelling in the treated area. Avoid social plans for a few days post-treatment.
- Arrive with everyday make-up on and bring your preferred eyebrow and lip pencils for colour matching.
- Do not wear contact lenses during or immediately after the procedure. Bring your glasses.
- If you are booked for an eyeliner procedure and you have lash extensions, please make sure it is removed 1-2 days before your appointment
- If you are booked for an eyeliner appointment and you currently use a lash serum, you need to stop with treatment at least 2 weeks pre procedure.
- If you are prone to cold sores or fever blisters, consult your GP for preventative antiviral medication before lip procedures.
- Photos will be taken before and after for our records. They will not be published without your written consent.
- Sensitivity may increase if you are premenstrual.
- Refrain from consuming alcohol, blood-thinning medication (e.g., Arnica, aspirin, anti-inflammatories, diuretics), or recreational drugs 24 hours before the procedure. If you have taken any, inform us—it does not automatically disqualify you. We use topical anaesthetics to minimise discomfort.
- Do not stop any prescribed medication without consulting your doctor. Contact us if unsure.
- Due to strict hygiene protocols, guests are not allowed in the procedure room unless arranged in advance. Alternatively, they may wait in the reception area.
- Most procedures take around 1 to 1 1/2 hour. Multiple procedures may take up to 3 hours.
- We accept cash, EFT, debit, and credit cards. Cheques are not accepted.
- Please notify us promptly if you are running late or need to cancel/reschedule.
- A 24-hour notice is required for cancellations or rescheduling.
- Oily skin types are not ideal for microblading as oil can cause pigment to spread, resulting in a more powdery, less defined appearance.
- After Consultation the technician will discuss which, technique will provide optimal results.
- Booking deposits can be paid via secure bank transfer or PayPal.

DEPOSIT POLICY:

- A non-refundable 50% deposit is required to secure all new bookings.
